```

```
Command Prompt
swarm      Manage Swarm
system     Manage Docker
trust      Manage trust on Docker images
volume     Manage volumes

Commands:
attach     Attach local standard input, output, and error streams to a running container
build      Build an image from a Dockerfile
commit     Create a new image from a container's changes
cp         Copy files/folders between a container and the local filesystem
create     Create a new container
diff       Inspect changes to files or directories on a container's filesystem
events     Get real time events from the server
exec       Run a command in a running container
export     Export a container's filesystem as a tar archive
history    Show the history of an image
images     List images
import     Import the contents from a tarball to create a filesystem image
info       Display system-wide information
inspect    Return low-level information on Docker objects
kill       Kill one or more running containers
load       Load an image from a tar archive or STDIN
login      Log in to a Docker registry
logout     Log out from a Docker registry
logs       Fetch the logs of a container
pause      Pause all processes within one or more containers
port       List port mappings or a specific mapping for the container
ps         List containers
pull       Pull an image or a repository from a registry
push       Push an image or a repository to a registry
rename     Rename a container
restart    Restart one or more containers
rm         Remove one or more containers
rmi        Remove one or more images
run        Run a command in a new container
save       Save one or more images to a tar archive (streamed to STDOUT by default)
search     Search the Docker Hub for images
start      Start one or more stopped containers
stats      Display a live stream of container(s) resource usage statistics
stop       Stop one or more running containers
tag        Create a tag TARGET_IMAGE that refers to SOURCE_IMAGE
top        Display the running processes of a container
unpause    Unpause all processes within one or more containers
update     Update configuration of one or more containers
version    Show the Docker version information
wait       Block until one or more containers stop, then print their exit codes

Run 'docker COMMAND --help' for more information on a command.

To get more help with docker, check out our guides at https://docs.docker.com/go/guides/
